Reflexive AI

Human-centered AI — Action Recipe

Describe one concrete action an organization can take to keep AI human-centered and govern it properly — clearly enough that someone outside your group could pick it up.

// THEME

// NAME OF THE ACTION

Write slowly and in capitals. So we understand the recipe later.

Be concrete. Name roles, steps and moments rather than general intentions.

Keep it non-sensitive. Avoid personal data and business-confidential information.

TYPE OF ACTION ☐ Awareness ☐ Policy ☐ Structure ☐ Workflow ☐ Training & skills ☐ Tooling ☐ Decision ☐ Strategy ☐ Other: _____

1 AIM — What is the aim?

- Which undesirable outcome does it prevent?
- Which desirable outcome does it encourage?

2 PEOPLE — Who needs to be involved?

- Who performs the action, and who decides?
- Who is affected, and how do they get a voice?

3 HYPOTHESIS — Why will it work?

- What changes along the way: behaviour, skills, incentives or decisions?
- What experience or evidence makes you believe this?
- Which assumptions must hold? What could make it fail or backfire?

4 STEPS — What should happen?

- What are the concrete steps, and in what order?
- What is needed to make it happen (time, budget, tools, mandate)? When does it start?

5 SUCCESS — When is it successful?

- Which signals, indicators or evidence show it works?
- Who checks this, and how often?
