Interview Guide

Identifying themes for a Governance Framework for Human-Centered AI in Organizations

Notes for the interviewer (do not read aloud)

- Goal: openly explore which themes/areas belong in a human-centered AI governance framework — as input for the workshop on October 2nd.
- Duration: approx. 20–45 minutes. Depth comes from follow-up questions, not more main questions — better to stay longer with a good answer than rush to the next one.
- Generic follow-up prompts that fit almost anywhere: "Can you give me an example of that?" · "How did that come about?" · "What was the consequence?" · "What would have needed to be different?" · "Does another similar situation come to mind?"
- Consent obtained beforehand
- Right after the interview: a short memo (context, first impressions, anything notable) for later coding.

Opening

> "Thank you for taking the time. We're currently gathering themes for a governance framework for human-centered AI in organizations, which will then be developed further with concrete measures in a workshop. Your perspective is very valuable to us. This conversation will take about 20–45 minutes and will be recorded — as discussed in the consent form."

Open Start

Goal: leave as much room as possible for the unexpected. Don't presuppose anything yet.

Q1. When you think about the use of AI in organizations – what comes to mind first?

Q2. Where do you encounter AI most in your everyday work?

Concrete Examples

Q3. Think of a specific situation where the use of AI in an organization really went wrong – what happened?

↳ *If nothing comes to mind: When would you say AI use in an organization "fails"?*

Q4. And conversely: a situation where it worked particularly well – what made that happen?

↳ *If nothing comes to mind: When would you say AI use in an organization creates value?*

Going Deeper

Q5. What do organizations often overlook when it comes to AI?

Q6. Who should be responsible when an AI-supported decision goes wrong?

Q7. How does AI use change your connection to your organization?

Q8. And how does it change your connection to your colleagues?

Q9. What must a good framework for AI in organizations cover, in your view?

↳ ***Ask right after:*** *And what should be considered so that it is human-centered?*

Closing

Q10. Is there anything we haven't touched on that's important to you?

> “Thank you very much for your time and your insights.”

Additional Questions

Only use if there's still time. Depending on the expert's field, consider adding one specialized question from their area if relevant.

HR	How does AI use change the role of leaders or employees?
Ethics	What ethical tensions do you see in everyday organizational life?
Law	Which legal aspects – e.g. co-determination, data protection – are central from your perspective?
Technology	What technical prerequisites or limitations are important to understand?
Leadership	How should leadership handle AI use within a team?
Autonomy	Should AI be allowed to communicate independently with other people/systems without prior approval?
Transparency	When should it be disclosed that AI was involved in a communication?
Power & co-determination	Who should have a say in introducing new AI tools?
Hidden use	Are there reasons employees might hide their AI use rather than disclose it?
Skill erosion	What skills might erode over time through excessive AI use?
Trust	How should over- or under-trust in AI recommendations be handled?
Equal access	Is access to AI tools and training distributed equally within the organization?
