

Reflexive AI Workgroup

Session results: what participants said about human-centered AI, which themes they chose to explore, and how they imagined failure, prevention and monitoring for each.

// SESSION

October 2, 2026 · Amersfoort (NL) · Session #1

15 participants, including facilitators. Formats: 1-2-4-All, dot voting on themes, and a Premortem with Shift & Share on the five highest-voted themes. Dutch responses are translated into English; the [raw data](#) includes the untranslated originals.

SESSION DETAILS

FACILITATORS	Christiaan Verwijs and Barry Overeem
DATE	October 2, 2026
PARTICIPANTS	15 (including facilitators)
LOCATION	Amersfoort · NL
INFORMED CONSENT	From all participants (available at Lucid Institute)
TRANSCRIPTION	Claude AI (verified by Christiaan Verwijs)
ANONYMIZATION	Christiaan Verwijs
RAW DATA	Session transcript on GitHub (including untranslated originals)

OPENING EXERCISE

1-2-4-All

“What does human-centered AI look like to you? How would you explain it to someone else?”

GROUP	#	RESPONSE
1	1	Maximize potential of AI to the greater benefit of human endeavours and quality of life based on human input and human curiosity to stimulate responsible agency <i>Note: "and human curiosity" squeezed in diagonally at the right; "to stimulate responsible agency" written below the crossed-out line</i>
2	2	Humans are in the driver's seat AI is a companion
2	3	- dictating pace guardrails humanity accountability ↳ compliance <i>Note: handwriting unclear; could read "humanarity"; linked to "accountability" by a connector line</i>
3	4	No slave
3	5	What value does it deliver?
3	6	Next wave of automation
3	7	Scope Human AI

Dutch responses are translated into English; the untranslated originals are in the [raw data](#). Struck-through text was crossed out on the sheet.

THEME SELECTION

Dot voting for themes

Participants voted on the sub-themes they wanted to explore further.

SUB-THEME	THEME	VOTES
Human Agency	Direction & Control	6
Work Design	People & Work	5
Meaningful Work	People & Work	4
Power & Dynamics	Culture & Voice	4
Workforce & Learning	People & Work	3
Questioning Culture	Culture & Voice	3
Purpose & Strategy	Culture & Voice	3
Quality & Oversight	People & Work	2
Communication	Culture & Voice	2
Review & Adaptation	Direction & Control	2
Risk & Boundaries	Boundaries & Duties	2
Participation	Culture & Voice	1
Governance & Ethics	Direction & Control	1
IP & Data Ownership	Boundaries & Duties	1
Sustainability	Boundaries & Duties	0
Legal & Compliance	Boundaries & Duties	0

Sorted by dot votes, highest first. The five sub-themes with the most votes were explored in the Premortem.

Human Agency

1 · FAILURE MODE

"Imagine what it would look like if AI was not human-centered for this theme. What would happen, or not happen?"

#	RESPONSE
1	Self-driving car choice: tree vs. child? Damage, risk, etc. Child cheaper than a collision with a tree.
2	The human becomes accountable, a 'scapegoat', while the human only executes.
3	The human is not in the loop; only at the end <i>Note: yellow sticky overlapping #2</i>
4	AI delivers unexpected/incomprehensible work. Unpredictable. AI's decision process = human thought process
5	① By not thoroughly checking the AI's process and outcome, we cause un[...] [...] <i>Note: end covered by #6</i>
6	How do you validate AI input? "Looks good to me" syndrome <i>Note: overlapping #5</i>

2 · PREVENTION / ACTIONS

"What can we do to prevent undesirable outcomes from occurring and encourage desirable outcomes to happen?"

#	RESPONSE
7	Example: you are a manager of AI agents. How do you manage an AI workforce?
8	Transparency ② Data, process and choices (formulas) must be visible and traceable so they can be checked
9	1 + 2 ⇒ Trust deterministic <i>Note: refers to ① on #5 and ② on #8</i>
10	Trust → choosing what/where to use AI and where not? See tasks under 'Workplace Design' <i>Note: overlapping #9</i>

Human Agency

3 · MONITORING

“What indicators, signals, or evidence can be tracked, monitored, or audited to avoid undesirable outcomes and encourage desirable ones?”

#	RESPONSE
11	Trust Human in the driver's seat
12	Compare outcomes of different AIs [LLMs] → more similar outcomes = more reliable?

Meaningful Work

1 • FAILURE MODE

"Imagine what it would look like if AI was not human-centered for this theme. What would happen, or not happen?"

RESPONSE

- | | |
|---|--|
| 1 | No more humans needed |
| 2 | Job loss speed >
New job speed |
| 3 | Everyone has unenjoyable bad work |

2 • PREVENTION / ACTIONS

"What can we do to prevent undesirable outcomes from occurring and encourage desirable outcomes to happen?"

RESPONSE

- | | |
|---|---|
| 4 | Retraining / reskilling |
| 5 | Involve more workers (bottom-up) |
| 6 | Lower expectations
Less talk, more performance
<i>Note: third line hard to read</i> |
| 7 | Value care / education jobs more |

3 • MONITORING

"What indicators, signals, or evidence can be tracked, monitored, or audited to avoid undesirable outcomes and encourage desirable ones?"

RESPONSE

- | | |
|----|-------------------------|
| 8 | Unemployment rate |
| 9 | Bullshit jobs declining |
| 10 | Work happiness index ↑ |

Power & Dynamics

1 • FAILURE MODE

"Imagine what it would look like if AI was not human-centered for this theme. What would happen, or not happen?"

#	RESPONSE
1	Tyranny of AI – turning humans into slaves shareholder <i>Note: linked by a curved arrow to "into"</i>
2	Job cuts
3	Risk to the quality of output created by AI
4	Loss of human knowledge by leaning too much on AI.
5	Not enough time to adapt to AI.
6	AI decisions more rational than humans.

2 • PREVENTION / ACTIONS

"What can we do to prevent undesirable outcomes from occurring and encourage desirable outcomes to happen?"

#	RESPONSE
7	Legislation that companies need to comply with. + sanctions
8	Education and awareness on a human-centric culture on the work floor – mainly for executives, but also across all levels.
9	Encourage cognitive work even if AI can do it, so that you don't lose knowledge.
10	Defend your institutions that represent humans – labour unions – universities

3 • MONITORING

"What indicators, signals, or evidence can be tracked, monitored, or audited to avoid undesirable outcomes and encourage desirable ones?"

#	RESPONSE
11	Legal case work to measure the effectiveness of legislation
12	Surveys to measure support for institutions

Power & Dynamics

3 · MONITORING (CONTINUED)

#	RESPONSE
13	Audit based on human-centered guidelines. CSR / annual reporting
14	Measure employee satisfaction regarding the role of AI in the workplace
15	Degree of humans in the loop when it comes to work being split.

Work Design

1 • FAILURE MODE

"Imagine what it would look like if AI was not human-centered for this theme. What would happen, or not happen?"

#	RESPONSE
1	The human is an operator and looks on – directing – monitoring
2	AI has control or power
3	Lots of burnout / bore-out
4	Imbalance between human & AI work
5	Abundance or class struggle
6	Humans lose control in the organization
7	Too little meaning / sense of purpose
8	Workflow too AI-driven, without a human measure, e.g. in a call center

2 • PREVENTION / ACTIONS

"What can we do to prevent undesirable outcomes from occurring and encourage desirable outcomes to happen?"

#	RESPONSE
9	The employee has control over the use of AI
10	Make policy based on strategy & mission/vision regarding organizational design and workflow design
11	Make outcomes measurable
12	Conscious choice from an HRM perspective Balance between humanity & the benefits of AI
13	Option to go back Fall-back
14	Knowledge of the advantages & disadvantages of AI, to support conscious choices Awareness!
15	Make the goal transparent FTE? Effective?
16	Value stream map with choices on human & process/AI optimization
17	Attention to the human measure from leadership

Work Design

2 • PREVENTION / ACTIONS (CONTINUED)

#	RESPONSE
18	Leaders who know what AI does to people

3 • MONITORING

“What indicators, signals, or evidence can be tracked, monitored, or audited to avoid undesirable outcomes and encourage desirable ones?”

#	RESPONSE
19	Employee satisfaction survey + fear + future + psychological safety
20	Team cohesion / effectiveness
21	Quality metrics
22	[SaaS platform for human factor team surveys] metrics
23	Sickness absence dropout, etc.
24	Customer satisfaction CES – CSAT
25	Hours / quality / token consumption
26	Freedom / autonomy & creativity
27	AI & awareness training completed
28	Value your tokens deliver
29	Cognitive load

Workforce & Learning

1 • FAILURE MODE

"Imagine what it would look like if AI was not human-centered for this theme. What would happen, or not happen?"

#	RESPONSE
1	Human plants (passively) feeding and being fed by machines Human-controlled?
2	People are led in a direction they don't want
3	Poor use → dissatisfied with the result → bad new AI
4	People feel stupid or (insurmountably) left behind
5	Really going backwards
6	People don't adapt and become "redundant"

2 • PREVENTION / ACTIONS

"What can we do to prevent undesirable outcomes from occurring and encourage desirable outcomes to happen?"

#	RESPONSE
7	Use AI together in a fun, challenging & valuable way
8	Help to show / dream up the desired outcome
9	TEAL Encourage: – a learning organization – rewarding adaptation (of behavior) – showcasing Prevent: not doing the above
10	Show how the AI loop closes (triple-loop learning)
11	Hackathon with & without AI

3 • MONITORING

"What indicators, signals, or evidence can be tracked, monitored, or audited to avoid undesirable outcomes and encourage desirable ones?"

#	RESPONSE
12	People feel mastery – they bend AI to their will
13	People feel no fear and see opportunities

Workforce & Learning

3 • MONITORING (CONTINUED)

#	RESPONSE
14	How does [Frederic Laloux] determine where an organization stands? Use that?
15	People know how to set limits for AI and guide it
16	[...] of # of changes <i>Note: first word illegible</i>
17	People do things!

QUESTIONS

#	RESPONSE
18	What does the human bring to the table?
19	– fact checking – the human measure – where (to use AI) and where not – curiosity – asking questions – critical thinking

Follow-up actions

We do not publish the follow-up actions identified by participants as part of the action research cycle. This data may convey personal or company-sensitive details. This data is only available to them and to the research team
